UNION GROUP'S HISTORY & GROWTH

History & Growth

In 1992, Union Group started to lay the first stone in manufacturing and fabricating storage units in general, but in 2000 we started to focus more on pharmacy display units and RX drawers, and we tried to offer best-in-class merchandising units with amazing shopping experiences.

As the company grew, we developed our production capabilities in pharmacy drawer systems and display units to improve the durability of our products and increase the lifespan of each single accessory.

Today, our products are available in more than 14,000 stores, including pharmacies and hospitals—not only in Egypt, but we are also present in countries like KSA, UAE, Qatar, and Kenya. We aim to expand our product exports to reach worldwide markets, as our quality truly competes with German products.

We have two main product categories: cosmetics display units and RX pharmacy drawer systems. Both are carefully engineered to match international standards and customer needs, plus we offer best-in-class maintenance and after-sales services.

Our products are designed to enhance medicine accessibility, store them in a safe place, ensure proper merchandising for cosmetics, and improve the store look and feel to create the most admired shopping experiences

Also, we offer various product dimensions and color schemes that allow any brand to choose the most suitable dimensions and colors to match their brand identity.

We regularly travel and attend international events and conferences to bring the most innovative technologies and ideas, reflecting them in our factories to improve the quality and flexibility of all our products.

We are very proud to announce that we are present in all branches of the most well-known pharmacy chains, executing the right design for them across all Egyptian cities, plus we have done a lot of work in Egyptian Armed Forces hospitals—positioning us as a pioneer of store fixture production in Egypt.

OUR SERVCIES

SERVICES

Our main scope of work is the design and production of RX medicine drawers and any fixtures related to the pharmacy, plus the construction work as per the below:

- As-built measurements
- Layout drawing in AutoCAD
- Electromechanical
